

**BACHELOR OF SCIENCE (HONS) IN  
- APPLIED COMPUTING  
- COMPUTER FORENSICS & SECURITY**

**EXAMINATION:**

**DISCRETE MATHEMATICS  
(COMMON MODULE)  
SEMESTER 1 - YEAR 1 - REPEAT**

**AUGUST 2024**

**DURATION: 2 HOURS**

**INTERNAL EXAMINERS:**

**DR KIERAN MURPHY  
DR DENIS FLYNN**

**DATE: TUE, 20 AUGUST 2024**

**TIME: 11:45 AM**

**VENUE: MAIN HALL**

**EXTERNAL EXAMINER:**

**MS MARGARET FINNEGAN**

**INSTRUCTIONS TO CANDIDATES**

- 1. ANSWER ALL QUESTIONS.**
- 2. TOTAL MARKS = 100.**
- 3. EXAM PAPER (5 PAGES) AND FORMULA SHEET (1 PAGE)**

**MATERIALS REQUIRED**

- 1. NEW MATHEMATICS TABLES.**
- 2. GRAPH PAPER**

**SOUTH EAST TECHNOLOGICAL UNIVERSITY**

## Question 1

(a) Consider the sequence 5, 8, 11, 14, 17, 20, ...

- (i) Construct a recursive definition for the sequence.
- (ii) Construct a closed form definition the  $n$ th term of the sequence.
- (iii) Is 2024 a term in the sequence?
- (iv) How many terms of the sequence are less than 1000?
- (v) Determine the sum of the first 100 terms of the sequence.

([5 × 2] 10 marks)

(b) What does the following function do? (Justify your answer).

```
def isWhat(n):  
    if (n > 2):  
        for i in range(2, n//2+1):  
            if (n % i) == 0:  
                return False  
        else:  
            continue  
        return True  
    elif (n==2):  
        return True  
    else:  
        return False
```

(4 marks)

(c) How many shortest lattice paths start at (2, 3) and

- (i) end at (7, 12)?
- (ii) end at (7, 12) and pass through (4, 8)?
- (iii) end at (7, 12) and avoid (4, 8)?

([3 × 2] 6 marks)

## Question 2

- (a) Consider the functions defined by the following Python code:  
(recall that `//` is integer division)

```
def f(x):  
    return x**2 - 4*x - 5  
def g(x):  
    return x + 5  
def h(x):  
    return x - 5  
def j(x):  
    return x//2  
def k(x):  
    return 2*x
```

Evaluate the following (note, show all work):

- (i)  $g(h(4))$     (ii)  $h(g(5))$     (iii)  $f(g(h(3)))$     (iv)  $k(j(7))$     (v)  $j(j(g(2)))$

(5 marks)

- (b) Use a truth table to determine whether the proposition

$$(q \rightarrow (\neg r \wedge \neg p)) \wedge (p \vee r)$$

is satisfiable.

(5 marks)

- (c) Evaluate each of the following

(i)  $\sum_{k=1}^5 k + 2$     (ii)  $\sum_{k=0}^4 2^k$     (iii)  $\prod_{k=2}^5 (k - 2)$

(6 marks)

- (d) Which of the following are well formed propositional formulas?

(i)  $p \neg q \wedge r$     (ii)  $\neg(q \wedge r) \rightarrow s$     (iii)  $\rightarrow (p \rightarrow \neg s)$     (iv)  $p \leftrightarrow (p \rightarrow s \neg)$

Justify your answers.

(4 marks)

### Question 3

(a) Consider the sets defined by the Python code

```
U = set(range(1, 10))
A = set(range(1, 8, 2))
B = set(range(2, 9, 2))
C = set(range(3, 6))

D = A.intersection(C).union(U.difference(B))
E = U.difference(A.union(B).intersection(C))
F = A.union(U.difference(B))
```

- (i) Write out the sets  $U$ ,  $A$ ,  $B$ , and  $C$ .
- (ii) Use a Venn Diagram to represent the sets above.
- (iii) Write down the equivalent mathematical expression for sets  $D$ ,  $E$ , and  $F$ .
- (iv) Compute the values for sets  $D$ ,  $E$ , and  $F$ .

([2 + 2 + 1 + 1] **6 marks**)

(b) Let  $S = \{1, 2, 3, 4, 5, 6\}$

- (i) How many subsets are there of cardinality 4?
- (ii) How many subsets of cardinality 4 have  $\{2, 3, 5\}$  as a subset?
- (iii) How many subsets of cardinality 4 contain at least one odd number?
- (iv) How many subsets of cardinality 4 contain exactly one even number?

([4 × 2] **8 marks**)

(c) Are the statements  $(P \vee Q) \rightarrow R$  and  $(P \rightarrow R) \vee (Q \rightarrow R)$  logically equivalent? Explain why.

(**6 marks**)

#### Question 4

(a)

```
A = set(range(1,5))  
R = {(a, b) for a in A for b in A if abs(a - b) <= 2}
```

- (i) From the Python code above, write out the set  $A$  and the relation  $R$  in set notation.
- (ii) Represent the relation  $R$  as a digraph.
- (iii) Is the relation  $R$  reflexive? symmetric? transitive? (Justify your answer).
- (iv) Is  $R$  an equivalence relation? (Justify your answer).
- (v) Determine whether the relation  $R$  is irreflexive? antisymmetric? asymmetric? (Justify your answer).

([3 + 3 + 3 + 2 + 3] **14 marks**)

(b) How many 14-bit strings (that is, bit strings of length 14) are there which satisfy each of the following criteria? Explain your answer.

- (i) End with the sub-string 0011.
- (ii) Have weight 7 (i.e. contain exactly seven 1's in total) and end with the sub-string 0011.
- (iii) Have weight of 7 and are divisible by 16.

([2 + 2 + 2] **6 marks**)

### Question 5

- (a) In a Python program, the variable  $x$  stores an unknown value. Running the following Python code (where  $\%$  denotes mod and  $//$  denotes integer division)

```
print (x%9, x//8)
```

produces the output:

2,4

Determine a value for  $x$  that produced the above output.

(4 marks)

- (b) Consider the following code:

```
password = 'AaBb12#$'
print('char', 'A', 'B', 'C', 'D', sep="\t")
for c in password:
    print(c, c.isdigit(), c.isupper(), c.islower(), c.isalpha(), sep="\t")
```

which produces the following table (only the first three rows are filled in).

| char | D     | U     | L     | A    |
|------|-------|-------|-------|------|
| A    | False | True  | False | True |
| a    | False | False | True  | True |
| B    | False | True  | False | True |
| b    |       |       |       |      |
| 1    |       |       |       |      |
| 2    |       |       |       |      |
| #    |       |       |       |      |
| \$   |       |       |       |      |

We have predicate

$$D(c) = \text{"Character } c \text{ is a digit."}$$

and similarly we have predicates for  $U(c)$ ,  $L(c)$ , and  $A(c)$ .

Complete the given table and determine the truth value of the following quantifiers.

- (i)  $\text{any}([c.\text{isdigit}() \text{ for } c \text{ in password}])$
- (ii)  $\text{all}([c.\text{isalpha}() \text{ or } c.\text{isdigit}() \text{ or } c.\text{isupper}() \text{ for } c \text{ in password}])$
- (iii)  $\nexists c [U(c) \wedge L(c)]$
- (iv)  $\exists c [\neg U(c) \wedge \neg L(c) \wedge \neg D(c) \wedge \neg A(c)]$

([4 + 4 × 3] 16 marks)

## Laws of Logic

| Logical Connective | Symbol   | Python Operator | Precedence | Logic Gate  |
|--------------------|----------|-----------------|------------|---|
| Negation (NOT)     | $\neg$   | <b>not</b>      | Highest    |  |
| Conjunctive (AND)  | $\wedge$ | <b>and</b>      | Medium     |  |
| Disjunctive (OR)   | $\vee$   | <b>or</b>       | Lowest     |  |

### Basic Rules of Logic

#### Commutative Laws

$$p \vee q \Leftrightarrow q \vee p \quad p \wedge q \Leftrightarrow q \wedge p$$

#### Associative Laws

$$(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r) \quad (p \wedge q) \wedge r \Leftrightarrow p \wedge (q \wedge r)$$

#### Distributive Laws

$$p \wedge (q \vee r) \Leftrightarrow (p \wedge q) \vee (p \wedge r) \quad p \vee (q \wedge r) \Leftrightarrow (p \vee q) \wedge (p \vee r)$$

#### Identity Laws

$$p \vee \mathbf{F} \Leftrightarrow p \quad p \wedge \mathbf{T} \Leftrightarrow p$$

#### Negation Laws

$$p \wedge (\neg p) \Leftrightarrow \mathbf{F} \quad p \vee (\neg p) \Leftrightarrow \mathbf{T}$$

#### Idempotent Laws

$$p \vee p \Leftrightarrow p \quad p \wedge p \Leftrightarrow p$$

#### Null Laws

$$p \wedge \mathbf{F} \Leftrightarrow \mathbf{F} \quad p \vee \mathbf{T} \Leftrightarrow \mathbf{T}$$

#### Absorption Laws

$$p \wedge (p \vee q) \Leftrightarrow p \quad p \vee (p \wedge q) \Leftrightarrow p$$

#### DeMorgan's Laws

$$\neg(p \vee q) \Leftrightarrow \neg p \wedge \neg q \quad \neg(p \wedge q) \Leftrightarrow \neg p \vee \neg q$$

#### Involution Law

$$\neg(\neg p) \Leftrightarrow p$$

### Implications and Equivalences

#### Detachment (Modus Ponens)

$$(p \rightarrow q) \wedge p \Rightarrow q$$

#### Indirect Reasoning (Modus Tollens)

$$(p \rightarrow q) \wedge \neg q \Rightarrow \neg p$$

#### Disjunctive Addition

$$p \Rightarrow (p \vee q)$$

#### Conjunctive Simplification

$$(p \wedge q) \Rightarrow p \quad (p \wedge q) \Rightarrow q$$

#### Disjunctive Simplification

$$(p \vee q) \wedge \neg p \Rightarrow q \quad (p \vee q) \wedge \neg q \Rightarrow p$$

#### Chain Rule

$$(p \rightarrow q) \wedge (q \rightarrow r) \Rightarrow (p \rightarrow r)$$

#### Resolution

$$(\neg p \vee r) \wedge (p \vee q) \Rightarrow (q \vee r)$$

#### Conditional Equivalence

$$p \rightarrow q \Leftrightarrow \neg p \vee q$$

#### Biconditional Equivalences

$$(p \leftrightarrow q) \Leftrightarrow (p \rightarrow q) \wedge (q \rightarrow p) \\ \Leftrightarrow (p \wedge q) \vee (\neg p \wedge \neg q)$$

#### Contrapositive

$$p \rightarrow q \Leftrightarrow \neg q \rightarrow \neg p$$
